Python code link: https://github.com/ParvezAlam123/Assignment-3/tree/main/code

X ₁	Random variable for first children
X ₂	Random variable for second children
X ₃	Random variable that at least one children is boy or girl

1 Prob. 2.10

$X_1, X_2, X_3 \in \{0,1\}$

$$P(X_3 = 1) = \frac{3}{4}$$

A family has two children. What is the probability that both the children are boys given that at least one of them is a boy ?

Solution:

Let g and b denote girl and boy respectively. then sample space

$$S = \{gg, gb, bg, bb\}$$

$$P(X_1 = 1, X_2 = 1) = \frac{1}{4}$$

$$\frac{P(X_1 = 1, X_2 = 1 | X_3 = 1)}{P(X_3 = 1)} =$$

$$= \frac{\frac{1}{4}}{\frac{3}{4}}$$

$$= \frac{1}{3}$$

$$= 0.333$$
